

Drug:

- any substance taken into the body that modifies or affects chemical reactions in body.

Antibiotics:

- chemical substances that are made by certain fungi & bacteria that affect a bacterial cell by disrupting their structure/function/reproduction
- used for the treatment of bacterial infections
 - ↳ some bacteria are resistant to antibiotics which reduces the effectiveness of antibiotics.
 - ↳ antibiotics should only be used when absolutely essential to limit the development of resistant bacteria such as MRSA.

* antibiotics kill bacteria but do not affect viruses.

⇒ nervous & hormonal system

		NERVOUS SYSTEM	HORMONAL SYSTEM
MADE UP OF		nerves (neurones), brain, spinal cord	glands
TYPE OF MESSAGE		electrical impulse	chemical hormone
SPEED OF TRANSMISSION		very fast	slower
LENGTH OF EFFECT		short - until nerve impulse stops	longer - until the hormone breaks down
