

carbohydrates

↳ carbon + hydrogen + oxygen
1 : 2 : 1

fats

↳ carbon + hydrogen + oxygen
1 : 2 : less than 1

proteins

↳ carbon + hydrogen + oxygen + nitrogen

Large molecules are made from smaller molecules

starch, glycogen and cellulose $\xrightarrow[\text{from}]{\text{made}}$ glucose

proteins $\xrightarrow[\text{from}]{\text{made}}$ amino acids

Fats and oils $\xrightarrow[\text{from}]{\text{made}}$ fatty acids and glycerol

tests

iodine solution test for starch -

↳ if starch is present, iodine goes from brown to blue - black or to purple.

benedicts solution test for reducing sugars

↳ if sugar is present, benedict goes from blue to brick red

biuret test for protein

↳ if protein is present, biuret goes from pale blue to purple

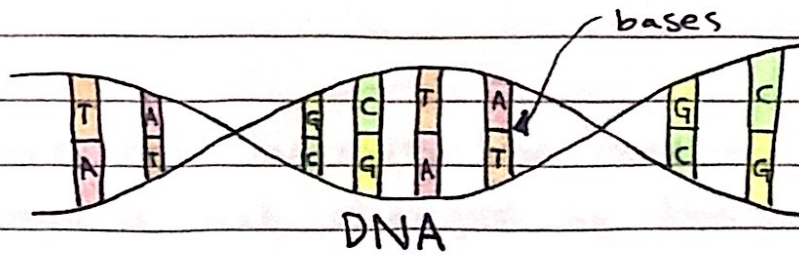

ethanol emulsion test for fats and oils

↳ if fats/oils are present, ethanol goes from clear to a white cloudy layer of precipitate

DCPIP test for vitamin C

↳ if vit. C is present, DCPIP goes from blue to a clear color

29/08/22

Describe the structure of a DNA molecule:-

- ① two strands coiled together to form a double helix
- ② each strand contains chemicals called 'bases'
- ③ bonds between pairs of bases hold the strands together
- ④ the bases always pair up in the same way: A with T, C with G.
