

Biology Definitions By Vasumitra Gajbhiye

▼ Define species.

- (group of) organisms that can reproduce to produce fertile offspring.

▼ Define diffusion.

- (net) movement of particles, from a region of higher concentration to a region of lower concentration/ down a concentration gradient;
- as a result of their random movement.

▼ Define tissue.

- a group of cells with similar structures
- working together to perform a shared function ;

▼ Define the term catalyst.

- (substance) that increases the rate of (chemical) reactions ;
- not changed, during / by, the reaction

▼ Define the term sense organ

- groups of receptor cells ;
- responding to specific stimuli ;

▼ Define sensitivity.

- as the ability to detect or sense stimuli in the internal or external environment ;
- and to make appropriate responses

▼ Define organ.

- structure made up of a group of tissues, working together to perform a specific function.

▼ Define chemical digestion.

- breakdown of large molecules to small molecules ;
- from insoluble to soluble ;

▼ Define the term assimilation.

- movement of digested food molecules into cells ;
- food molecules become part of cells ;

▼ Define hormone.

- chemical/ substance, produced by a gland
- transported/ carried in the blood (plasma)
- alters the activity of one or more specific target, organs/ tissues/ cells.
- controls/ regulates/ affects, (activity of) target organ(s).

▼ Define meiosis.

1. reduction / nuclear, division ;
2. chromosome number is halved ;
3. (diploid to) haploid ;
4. results in genetically different, cells / gametes / AW ;

▼ Define fitness.

the probability of an organism will surviving and reproducing (in the environment in which it is found)

▼ Define the term transmissible disease.

- Disease caused by pathogen
- that can be passed from one host to another.

▼ Define the term deamination.

- removal of nitrogen containing part of amino acids ;
- to form urea

▼ Define the term inheritance.

transmission of genetic information from generation to generation ;

▼ Define the term co-dominance.

- both alleles are, expressed / neither allele is, dominant / recessive to the other ;
- the phenotype (of heterozygote is), intermediate / new / different / AW ;
- presence of multiple alleles, for one trait ;

▼ Define the term sex-linked characteristic.

- gene is located on, a sex chromosome / X or Y / X / Y ;

- characteristic is more common in, males / one sex (than the other) ;

▼ Define the term phenotype.

Observable features (of an organism)

▼ Define the term allele.

a version/ type, of a gene

▼ Define the term chromosome.

- (thread-like structure) made / length / strand / composed / molecule, of DNA ;
- carries / contains, genes / alleles / genetic information or material ;

▼ Define the term sustainable development.

- development that provides for the needs of an (increasing) human (population) ;
- without harming the natural environment / ecosystems / habitat ;

▼ Define population.

- isolated group of individual animals
- of the same species
- living in the same place
- at the same time.
